

3D - PACK

netp@cking

PRODUCT

A Dependable Product

3D-PACK® is the result of Polibox's research into new systems that are able to unite safety and value while also assisting clients in facing the challenges imposed by globalization. Every single aspect of the products' safety has been evaluated. 3D-PACK® offers elevated efficiency in product protection by designing the packaging according to a specific computer programme that analyses the product's size and shipment type.

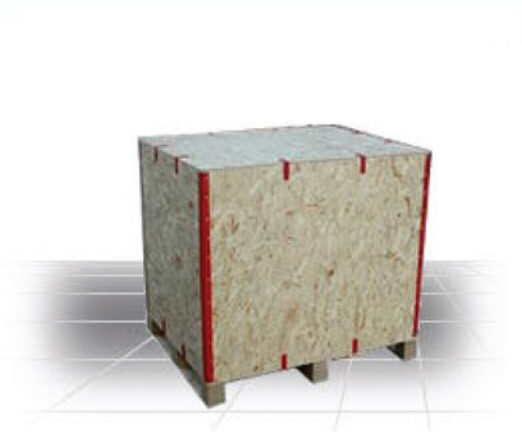

Analysis and Design.

The photo below depicts a compression test which is used to determine static capacity. Individual product samples are put through their paces in our TEST AREA. Package design is one of the services most frequently requested by our clients.

Advantages of using integrated fasteners.

A system of rapid closure. Nails, screws, straps and similar type equipment are a thing of the past. 3D-PACK® does not require any tools nor the use of specially equipped areas or specific skills. 3D-PACK® is the most modern response to the problems linked to workplace safety (accidents, noise), which are consistently more evident and controlled. 3D-PACK® eliminates all risk of product damage caused by inadequate closure of the container, protruding nails and screws and straps that loosen during transport due to stacking. The benefits are also multiplied in the area of management. Another feature of this complete solution (container, pallet, fastener system, protection in an individual product) is that it eliminates the necessity of multiple suppliers and the problems associated with their coordination and management.

ADVANTAGES

> VALUE FOR MONEY

The price is offered is equivalent to that of a cardboard box strength + pallet

> PRACTICAL

The **FOLDABLE SYSTEM** reduces warehouse volume and is simple and quick to assemble.

> SECURE

Durethan® FASTENER KLIP. Does not require fastening tools and offers exceptional resistance.
