

FOLDABLE SYSTEM

netp@cking

FOLDABLE SYSTEM Mod. LIGHT

In all situations where it is necessary to provide a versatile solution that offers the best protection available with highly contained weight and costs. The dimensions, the type of base, and the print specifications are based on the effective needs of the client.

The crate is composed of 3 elements: a base, foldable sides and a cover. The base is normally built in multi-ply or conifer wood and palletised on 2 or 4 sides. The foldable sides and the cover are built in multi-ply Nordic birch. Assembly uses groove joints and can be finalised using fastening nails, screws or plastic or metal straps.

ADVANTAGES

- > **Made to measure product**
- > **Occupies very little space when disassembled**
- > **Elevated weight/resistance ratio**
- > **Personalised printing - visual communication**
- > **Dry wood, void of mildew and unsound knots.**
